1. Complete the following tasks using **automation:**

   Access [http://the-internet.herokuapp.com/broken_images](http://the-internet.herokuapp.com/broken_images), validate if there are broken images.

   Access [http://the-internet.herokuapp.com/upload](http://the-internet.herokuapp.com/upload) and try uploading any file

   Create a Github repository with the automation code and share the link, also add a report of the test in the README file of the repository.

2. Go to [hack2skill.com/signup](hack2skill.com/signup) and register on the hack2skill platform test the registration, login and user dashboard page and compile a testing report for each page that includes the following:

   a. Compilation of test scenarios
      *Example test scenario: 'All mandatory fields should be validated and indicated by an asterisk (\*) symbol.'*

   b. Defect Reporting
      *Defect reporting should contain the following fields: "defect ID", "title", "Defect Description/ Steps to produce" ,"Expected result", "actual result", "evidence", "severity", "environment"*

   c. Providing suggestions
